

Sustainability in clinical supply

Why is it an emergency?

05.12.2022

CONTEXT- Sustainability is becoming crucial for pharmaceutical companies; this movement is particularly reliant on the clinical trial supply chain for innovation.

Regardless of whether it's due to ESG regulations in the United States, CO2 neutrality requirements established by pharma businesses, or the decreasing limit in capacity of finite resources - It is evident that the supply chain plays a crucial role in being the change for a greener society.

Attendees from

The challenge of sustainability

In this webinar, we discussed how other industries use technology to achieve their goals and how these strategies should be applied throughout the clinical trial supply chain to continue to be at the forefront of innovation. We then highlighted case studies that prove the vast capabilities we are able to achieve with proper data, technology and collaboration.

With proper data, technology, and collaboration, it is inevitable that the pharmaceutical industry can continue to be the leaders of a greener society.

Watch the replay to know:

-  How to navigate KPIs and trends that will strongly impact the future of clinical supply chain;
-  How sustainability, ethics, waste reduction and faster timelines work hand-in-hand with each other;
-  What changes can be conducted within biopharma organizations to anticipate these changes and continue to stay ahead of the competition.

N-SIDE is a deeptech company that empowers organizations in the life sciences to make better decisions and optimize the use of critical resources. We're doing so by combining deep industry expertise with applied mathematics and artificial intelligence into easy to use and cutting-edge software that transforms uncertainty and complexity into deterministic outcomes. We are an active player in clinical trial supply chain management for over 20 years and have the majority of the top 20 pharmaceutical companies as clients.

With our software solution, the N-SIDE Suite, and expert services, we streamline the clinical supply of pharmaceutical and biotech companies by accelerating clinical plans, mitigating risks and curbing drug waste. We empower clinical leaders to make better, faster and safer decisions for patients waiting for life-changing medications.
